16. Abstract The purpose of the Proof of Concept (POC) test is to verify the functionality and performance of the system which captures latitude, longitude and elevation of the work zone configuration, travel path and features. From this information we can accurately create a work zone map message in 3 different formats that can be shared with other Connected Vehicle systems. The key system engineering elements for the POC are documented in the companion document System Engineering and Testing Plan for Proof-of-Concept of Integrated Work Zone Mapping Toolset. That document summarizes system engineering architecture and requirements for the POC system as well as a demonstration and testing plan. That document is intended only as summary of key elements sufficient to support proof of concept testing.

Chapter 1. Introduction

1.1 Project Scope

Work zones are dynamic and change roadway characteristics frequently, affecting mobility and safety of traffic flow. Up-to-date information about dynamic conditions occurring on roads – such as construction events – is needed by both the traveling public, and by connected and automated vehicles (CAVs) to navigate work zones safely and efficiently. The objective of Task 6 of the V2X Mapping Project is to develop, test and demonstrate a proof of concept (POC) system for efficiently capturing a digital map of a work zone and its features, including lane closures and workers present in the work zone. These data are combined with other work zone configuration data to form a work zone map message that is published to disseminate to infrastructure owners and operators (IOO) traveler information systems, third-party traveler information systems, and ADS such as the FHWA CARMA vehicle. The work zone map message is to be published in WZDx V2 [1], SAE J2945/4 RSM (XML) [4], and SAE J2945/4 RSM (binary) [4] formats.

1.2 Purpose of this Test

The purpose of the Proof of Concept (POC) test is to verify the functionality and performance of the system which captures latitude, longitude and elevation of the work zone configuration, travel path and features. From this information we can accurately create a work zone map message in three different formats that can be shared with other Connected Vehicle systems.

The key system engineering elements for the POC are documented in the companion document System Engineering and Testing Plan for POC of Integrated Work Zone Mapping Toolset. That document summarizes system engineering architecture and requirements for the POC system as well as a testing plan. That document is intended only as summary of key elements sufficient to support POC testing. The interfaces of the POC system are described in the other companion document, the Interface Control Document (ICD) for POC of Integrated Work Zone Mapping Toolset.

1.3 Summary of Testing Procedures and Results

The test for the POC work zone mapping tool consists of a single vehicle equipped with a Ublox GPS device connect to a computer running the Work Zone Data Collection application, with access to the Work Zone configuration creator and internet.

These tests were executed at the Archer test site in Wyoming. This test site contains a large oval shaped roadway approximately 1.6 km in diameter, and some additional service roads with 0.5 km straight and curved road sections. The test site is located about 12 km East of Cheyenne WY, at the Archer exit on Interstate 80. All testing was completed on July 24th, 2020.

Figure 1. Archer Complex Testing location

The results from the tests are recorded in the results section of this document and organized by round of testing. The files created and generated by this tool include a configuration file (custom JSON), the path and features (CSV) file, RSM (UPER) message file, RSM (XML) file and WZDx (GeoJSON). Detailed information about each of these files are documented within the test case descriptions. The files generated from the testing as well as an Excel document used for calculations are located here: <https://github.com/TonyEnglish/V2X-manual-data-collection/tree/master/Sample%20Files/Testing%20Data>

Each step in the test plan in Table is performed 5 or 10 times. To pass the step, the pass/fail criteria must be met 5 out of the first 5 times or 9 out of first 10 times.

1.4 Document Organization

This Test Report document is organized into three chapters

1. Introduction
2. Approval
3. Test Procedure and Test Cases

Chapter 2. Approval

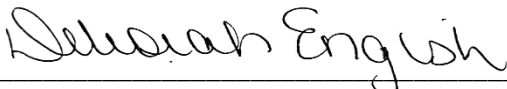

The following signatures indicate that this test result reported in this document have been reviewed and approved by:

Tony English (Lead Test Engineer)

7/28/2020

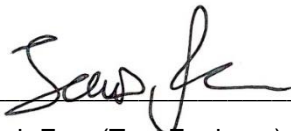

Date

Debbie English (Test Engineer)

7/28/2020

Date

Jacob Frye (Test Engineer)

7/28/2020

Date

Chapter 3. Test Procedure and Test Cases

This chapter describes the testing and procedures to run each test. For each test, the steps and procedures are listed out by test name.

3.1 Table WZ Mapping Toolset Test Case Summary

Table 1 lists the steps for the test case summary.

Table 1. WZ Mapping Toolset Test Case Summary

Step	Activity	Action	Expected Result	Testing Requirements Verified
Initialize and prepare for Testing				
1	Initialize Back Office Folders	Empty Back Office File Folders including <ul style="list-style-type: none"> WZ Config {JSON} & WZ Map {RSM(XML)}, {RSM(binary)}, WZ Path & Features, and {WZDx} (Unzipped) File Folder Verified WZ Map {RSM(XML)}, {RSM(binary)}, and {WZDx} File Folder 	File folder inspection shows file folders are empty	
2	Initialize Laptop Application and Folders	Initialize Laptop Work Zone Data Collection Application. Empty Laptop File Folders including: <ul style="list-style-type: none"> WZ Config {JSON} & WZ Path & Features {CSV} File Folder 	<ul style="list-style-type: none"> Application open and ready for input File folder inspection shows file folders are empty	

Step	Activity	Action	Expected Result	Testing Requirements Verified
		<ul style="list-style-type: none"> WZ Config {JSON} & WZ Map {RSM(XML)}, {RSM(binary)}, WZ Path & Features, and {WZDx} File Folder (Zipped) File Folder 		
3	Prepare Testing WZ track	<p>Set up Testing WZ including Cone Placement for</p> <ul style="list-style-type: none"> Begin of WZ Begin of Lane Closure Begin of Workers Present End of Workers Present End of Lane Closure End of WZ <p>Independently measure Lat/Long of work zone features within +/- 2m accuracy of</p> <ul style="list-style-type: none"> Begin of WZ Begin of Lane Closure Begin of Workers Present End of Workers Present End of Lane Closure End of WZ 	Testing WZ is setup, measured, and ready for testing.	PRD-01, PRD-02, PRD-03, PRD-04, PRD-05, PRD-06

Step	Activity	Action	Expected Result	Testing Requirements Verified
Conduct Testing				
4	Verifies TMC Configuration Creator	<ul style="list-style-type: none"> • Test Engineer opens TMC Configuration Creator page and enters each parameter. • Upon completion, WZ Config {JSON} file is saved and published to Azure cloud storage and downloaded to designated file folder. • Test Engineer opens and displays WZ Config file using file inspection tool. • Test engineer shows that WZ configuration parameters are correct. 	<ul style="list-style-type: none"> • Testing of Configuration Creator, including the following fields: <ul style="list-style-type: none"> ○ Work Zone Description ○ Number of lanes ○ Vehicle Path Data Lane ○ Average Lane Width ○ Normal speed (before work zone) ○ Work Zone Speed without workers ○ Work Zone speed with workers ○ Work Zone Type ○ Start Date and Time ○ End Date and Time ○ Days of the Week in operation ○ GPS location (latitude / longitude) for the beginning and end of work zone • Entry of additional WZDx information: <ul style="list-style-type: none"> ○ Beginning Cross Street ○ Ending Cross Street ○ Event Status ○ Road Direction ○ Accuracies – Beginning, Ending, Start Date and End Date ○ Work Types ○ Lane restrictions ○ Lane Types 	PRT-01, PRT-02, PRT-03, PRT-04, PRT-06, PRT-07

Step	Activity	Action	Expected Result	Testing Requirements Verified
			<ul style="list-style-type: none"> ○ Issuing Organization ○ WZ Location Method ○ LRS Type ○ Location Verify Method ○ Data Feed Frequency Update ○ Contact Name ○ Contact Email 	
5	Setup Laptop and WZ Path Application in Vehicle	<ul style="list-style-type: none"> • Test engineer sets up laptop in vehicle, connecting GPS antenna and power as needed. • Test engineer initiates WZDC application and verifies application is receiving valid GPS coordinates. • Test engineer loads configuration file into WZDC application and verifies it has loaded the configuration file. • Test engineer presses “Begin Data Collection” and verifies the application is ready to capture data. 	WZDC application and vehicle are ready for data collection.	PRW-01, PRW-02, PRW-03, PRW-04 PRT-02, PRT-03, PRT-04
6	Confirm track is clear and all equipment and participants are ready to safely conduct testing.	<ul style="list-style-type: none"> • Driver confirms Testing WZ track is clear and testing is ready to proceed. • Driver starts vehicle. • Driver confirms all parties are ready to begin and all participants agree testing can be performed safely. 	Track and all participants are ready for data collection and ready for vehicle to traverse the Testing WZ.	

Step	Activity	Action	Expected Result	Testing Requirements Verified
Vehicle Path Data Collection				
7	Driver traverses testing WZ path	<ul style="list-style-type: none"> Driver begins traversing the specified path adjacent to the work zone, accelerating to and holding 15 mph, adhering to the middle of the lane as much as practical. Driver continues to end of Testing WZ and stops vehicle. 	Vehicle containing testing participants traverses the Testing WZ.	
8	Test Engineer captures WZ path and features while traversing WZ path	<p>While traversing the specified path adjacent to the work zone, the test engineer shows that the application automatically completes the following steps:</p> <ul style="list-style-type: none"> Data collection begins Reference point is marked Data collection ends <p>While traversing the specified path adjacent to the work zone, the test engineer toggles the WZDC Vehicle Path Data Acquisition application controls when perpendicular to each of the following:</p> <ul style="list-style-type: none"> Begin of Lane Closure Begin of Workers Present End of Workers Present End of Lane Closure 	<ul style="list-style-type: none"> Data collection begins ~50m before the Begin of WZ marker Reference point is marked when roughly perpendicular to Begin of WZ Data collection ends when roughly perpendicular to End of WZ <p>WZ Vehicle Path Data Acquisition Application captures path and feature lat/long data.</p>	PRW-05, PRW-07, PRW-08, PRW-09, PRW-11

Step	Activity	Action	Expected Result	Testing Requirements Verified
Data and Map Message Assessment				
9	Inspection of WZ Path & Features file	<p>Upon completion of the WZ Testing run</p> <ul style="list-style-type: none"> Test engineer verifies that the WZ Path & Features {CSV} file is located in the designated laptop file folder. Test engineer opens and displays WZ Path & Features {CSV} file using file inspection tool. Test engineer shows that WZ path and features lat/long are collected. <p>(accuracy is verified in Step 10)</p>	<ul style="list-style-type: none"> WZ Path & Features File located in the specified laptop folder. <p>Inspection of the WZ Path & Features file verifies that WZ path and features parameters were collected and stored in a CSV file.</p>	PRW-06, PRW-10, PRW-12
10	Verify WZDC message builder. Inspect WZ Map {RSM(XML)} File.	<ul style="list-style-type: none"> Test engineer verifies that the WZ Map {RSM(XML)} File is in the designated laptop folder. Test Engineer opens and inspects WZ Map {RSM(XML)} File using file inspection tool. Test engineer verifies that WZ map path and features lat/long are captured. <p>Test engineer analyzes results and shows that WZ map features (and lane tapers) lat/long are within specified tolerances.</p>	<ul style="list-style-type: none"> WZ Map {RSM(XML)} file is located in the specified laptop folder. Inspection verifies that WZ map path and features lat/long were collected and stored in an RSM(XML) file. <p>Analysis verifies that WZ map features (and lane tapers) lat/long are within acceptable tolerances.</p>	PRW-13, PRW-13.1, PRW-13.2, PRW-13.3, PRW-14, PRW-17
11	Verify RSM(XML)->WZDx Translator. Verify RSM(XML)->{RSM(binary)} Translator.	<ul style="list-style-type: none"> Test engineer verifies that the WZ Map {WZDx} file is located in the designated laptop file folder. Test engineer verifies that the WZ Map {RSM(binary)} file is located in the designated laptop file folder. 	<ul style="list-style-type: none"> WZ Map {WZDx and RSM (binary)} files are located in the specified laptop folder. 	PRW-15, PRW-16,

Step	Activity	Action	Expected Result	Testing Requirements Verified
		<ul style="list-style-type: none"> Test Engineer opens and displays WZ Map {WZDx} File using file inspection tool. <p>Test engineer shows that WZ path and features parameters are consistent with WZ Map {RSM(XML)} file.</p>	Inspection verifies that WZ path and features parameters were collected and stored in WZDx file.	
12	Verify work zone data ZIP archive contents.	<ul style="list-style-type: none"> Test engineer verifies that the ZIP archive is located in the specified laptop directory. Test engineer unzips local zip file and shows that all of the files are present 	Inspection shows that WZ Config, WZ Path & Features, WZ Map {RSM(XML)}, {RSM(binary)} & {WZDx} are present in the local unzipped archive.	PRW-18
13	Trigger WZDC tool to upload files to Back Office.	<ul style="list-style-type: none"> Test engineer presses “Upload” on the WZDC application and verifies that the application displays a success message. Test engineer verifies that the ZIP archive is located in cloud storage. Test engineer verifies that messages and files are organized in cloud storage. 	Inspection shows that WZ Config, WZ Path & Features, WZ Map {RSM(XML)}, {RSM(binary)} & {WZDx} are uploaded and stored in the designated Back Office File folder (unzipped).	PRW-19, PRW-20 PRT-10, PRT-11
14	Verify TMC Website Visualizer.	<ul style="list-style-type: none"> Test engineer activates the TMC Visualization and Verification application and loads the work zone. Test Engineer displays the WZ Map {RSM(XML)} & {WZDx} files to the independently measured lat/long and to the satellite map of the Testing WZ. Test Engineer verifies that the WZ Map {RSM(XML)} & {WZDx} files correctly depict <ul style="list-style-type: none"> Begin of WZ Begin of Lane Closure Begin of Workers Present 	Inspection confirms that verified WZ Map {RSM(XML)} & {WZDx} are stored in the designated Back Office File folder, ready for download by others.	PRT-12, PRT-13, PRT-13.1, PRT-13.2, PRT-13.3, PRT-13.4, PRT-13.5, PRT-14, PRT-14.1, PRT-14.2, PRT-15, PRT-16

Step	Activity	Action	Expected Result	Testing Requirements Verified
		<ul style="list-style-type: none"> • End of Workers Present • End of Lane Closure • End of WZ • Test Engineer verifies approval feature of application and storage of files in designated Back Office File Folder. • Test Engineer opens, displays and confirms transfer of each of the WZ Map Files using file inspection tool. 		
15	Verify availability of WZ Map {RSM(XML)} and WZ Map {WZDx} Files Third party traveler information services and for CARMA systems.	<ul style="list-style-type: none"> • Test Engineer inspects file folders and shows WZ Map {RSM(XML)}, {RSM(binary)}, and {WZDx} Files are available for access by simulated Third party traveler information services and for CARMA systems. • Test Engineer downloads all 3 messages and verifies the contents of the download ZIP archive using a file inspection tool 	Downloaded ZIP archive contains all 3 messages	PRT-17
